PROFESSIONAL EXPERIENCE

JP Morgan Chase – Software Engineer

August 2025 – Present

- Optimized bulk data validation for jobs processing 1K–2K records by redesigning data quality validation checks from per-record execution to batch validation, reducing processing time from 150s to 67s (~2.2× faster) and enabling bulk job creation via API instead of manual Excel-based workflows
- Architected and implemented migration of audit report storage from relational databases to AWS S3 after evaluating storage tradeoffs, reducing costs by ~30% and enabling scalable handling of frequently generated reports
- Built and integrated Java-based APIs to manage FX trade rules, connecting with downstream services via AWS-based messaging and API gateways to support event-driven transaction workflows and streamline rule onboarding
- Designed and implemented a Java-based event-driven API integrating Kafka for real-time data routing across enrichment, gateway, and relational database layers, reducing manual account lookup time by 60%

JP Morgan Chase – Software Engineering Intern

May 2024 – August 2024

- Improved an engineering workflow used for API request generation by building an internal Flask and React application to automate Parquet-to-JSON data transformation, reducing manual effort by 20%
- Enhanced performance of distributed data pipelines processing 5TB+ of metadata by optimizing NiFi cluster workflows and Databricks transformations through schema optimization, reducing latency by 30%

State Farm – Software Engineering Intern

May 2023 – December 2023

- Optimized performance of a React and MongoDB data visualization dashboard handling 150,000+ records by implementing backend caching and improving database query efficiency, reducing response time by 15%

TECHNICAL PROJECTS

PolicyGraph AI | FastAPI, React.js, TypeScript, PostgreSQL, Redis, Docker

April 2026

- Built an AI-powered support triage system using FastAPI, React.js, PostgreSQL, and LLMs to convert unstructured customer tickets into structured belief states and automated policy decisions
- Designed a belief extraction pipeline using LLMs to classify ticket attributes (urgency, customer tier, ambiguity), enabling explainable routing across escalation, retrieval, and workflow automation
- Leveraged Redis caching and PostgreSQL JSONB storage to reduce inference latency and enable traceable, stateful decision workflows across the end-to-end pipeline

JPMorgan Code for Good Hackathon: CodeAlong | React.js, Python, Firebase, Git

November 2024

- Led a team of 7 to architect and develop a full-stack learning platform using React, Python, and Firebase, delivering a functional prototype that earned 2nd place at JPMorgan Code for Good

iPlan | Dart, Flutter, Firebase

October – December 2024

- Built a full-stack mobile application using Flutter/Dart and Firebase that allows users to plan events by budgeting finances, creating an event itinerary, setting task deadlines with a calendar, and collaborating with other users
- Designed and implemented a task prioritization feature using Flutter, enabling users to organize tasks by importance and track progress with a checklist, enhancing user productivity

UTD Building Classifier App | Swift, OpenML, Figma

March 2023

- Built an iOS application using Swift and Core ML to perform real-time building classification with on-device inference, enabling low-latency predictions from live camera input
- Developed and trained a supervised learning model on a custom dataset of 500+ images across 10+ classes, achieving 95%+ accuracy through data preprocessing and feature optimization

TECHNICAL SKILLS

Languages: Java, Python, C++, TypeScript, JavaScript

Frameworks & Tools: React, Node.js, Flask, Git, Terraform, Apache Spark

Cloud & Data & Tools: AWS (S3, Lambda, ECS, Glue), SQL, Databricks, SQL, NiFi, MongoDB, DynamoDB, PostgreSQL

EDUCATION

The University of Texas at Dallas — Richardson, TX

Bachelor of Science in Computer Science, GPA: 3.7/4.0

Relevant Coursework: Data Structures, Algorithms, Database Systems, Operating Systems, Computer Networks
